RGF® first developed its advanced oxidation technology over 20 years ago. Over four million RGF® cells are in use around the world. RGF® has licensed its technology to many Fortune 500 companies for use in the medical, food, military, residential, commercial, marine, hospitality and government. RGF® cells in various products have been tested and/or approved or registered by:

- ETL, TUV, EU, CSA
- U.S. Military
- Electric Power Research Institute
- Chinese Government
- Japanese Government (TV commercials)
- Canadian Government
- U.S. Government
- European Union
- USDA & FSI

In addition, RGF® cells have been specified in the Norovirus & MRSA protection plan of America's largest restaurant chains, hotel chains, theme parks, cruise lines, public schools and hospitals. The following is a summary of some of the testing and studies performed by third party independent labs and universities. RGF® products are not medical devices and no medical claims are made.

### H1N1 (Swine Flu)

Kansas State University has completed preliminary testing on RGF’s Photocatalytic Oxidation (PHI-Cell®) and Reflective Electromagnetic Energy (REME® Cell) technologies with 99+% inactivation of the H1N1 virus (referred to as “swine flu” early on) on a stainless steel surface. This virus was first detected in people in the United States, April 2009. It is now considered a regular human flu virus, continuing to circulate seasonally worldwide according to the CDC. Flu viruses are spread mainly from person to person through coughing or sneezing. Sometimes people may become infected by touching items such as a surface or object with flu viruses on it and then touching their mouth or nose.

Tested by: Kansas State University Inactivation Rate 99+%
Streptococcus Sp.

Group A Streptococcal (strep) infections are caused by group A Streptococcus, a bacterium responsible for a variety of health problems.

Tested by: Kansas State University Inactivation Rate 96+%
**Tuberculosis**

Tuberculosis typically attacks the lungs, but can also affect other parts of the body. It is spread through the air when people with infection cough, sneeze, or otherwise transmit their saliva through the air. Most infections are asymptomatic and latent, but about one in ten latent infections eventually progresses to active disease which, if left untreated, kills more than 50% of those so infected.

---

**Legionella**

Legionella is common in many environments, with at least 50 species and 70 serogroups identified. The chemical composition of these side chains determine the nature of the somatic or O antigen determinants, which are essential means of serologically classifying many Gram-negative bacteria.

---

**Streptococcus Pneumoniae**

S. pneumoniae is an exclusively human pathogen and is spread from person-to-person by respiratory droplets, meaning that transmission generally occurs during coughing or sneezing to others within six feet of the carrier. Health experts estimate that more than ten million mild infections (throat and skin) like these occur every year.

Tested by: Kansas State University Inactivation Rate 99+%  

---

**Mold/Yeast**

The purpose of this test was to evaluate the effect the RGF® AOT unit has on mold/yeast bacteria (TPC). This test was performed utilizing a standard 2,000 sq. ft. home and 3,000 sq. ft. simulated home.

Tested by: California Microbiology Center  
Bacteria 99%  Mold 97-98%  Yeast 90+%  

---

**Chemical Compounds**

Gas Chromatograph/Mass Spectrometer test performed by Nelap Accredited Lab on airborne chemical compound reduction using RGF’s AOT.

- Hydrogen Sulfide - Rotten eggs
- Methyl mercaptan - Rotten cabbage
- Carbon Disulfide - Vegetable sulfide
- Butyl Acetate - Sweet banana
- Methyl Methacrylate - Plastic

Methyl Methacrylate / Butyl Acetate / Methyl Mercaptan 100%
Hydrogen Sulfide 80%  Carbon Disulfide 30%

---

**Odors**

The purpose of this test was to evaluate to what effect the RGF’s AOT unit has on cleaning chemicals, pet odors, smoke and perfume odors. This test was performed utilizing two 500 cubic foot test chambers and a ten-person odor panel. The qualitative assessments of the ten-person odor panel were then used as a means to determine the odor reduction.

Tested by: C&W Engineering (Independent PE Firm)

- Pet Odors 72%
- Smoke Odors 70%
- Perfume Odors 63%  Cleaning Chemicals 55%+

---

**Formaldehyde**

The purpose of this test was to evaluate the effect the RGF® AOT unit has on formaldehyde.

Tested by: Kansas State University in a Class II Bio test chamber
A testing protocol concept was used which included a "Sneeze Simulation Machine" and "Sneeze" chamber. A sneeze can travel at up to 100 mph, so we had to consider lung capacity, sneeze pressure, and liquid volume to properly simulate a human sneeze. This was accomplished and the test proceeded with outstanding results. An average of 88% reduction of microbials was achieved with PHI in a double blind test, at three feet from the sneeze source. This is clearly not a medically supervised test or protocol. However, from a practical point, it was definitely providing some kill at the source and will provide some level of protection. When RGF® developed the next generation of Advanced Oxidation Technology, REME®, the same testing was performed and an average of 99% reduction of microbials was achieved in the same 3 foot distance. 

Tested by: Kansas State University, inactivation 99%
Simulated Sneeze Lab Test at three feet in a 250 cu ft Bio Test Chamber. An independent PE double blind study.

All the above tests were performed on RGF® advanced oxidation products with advanced oxidation plasma of less than .02 ppm. They were conducted by independent accredited labs and university studies. They were funded and conducted by RGF’s major clients to assure third party credibility. RGF® products are not medical devices and no medical claims are made.

*R some products may not be available to be sold in the state of California.

RGF® Environmental Group
ISO 9001:2015 Certification

ISO 9001:2015 is a internationally recognized standard that specifies the requirements for an audited Quality Management System (QMS). RGF® developed their QMS to promote continuous improvement in every aspect of their business, including administrative functions, quality control, product development, engineering, production, marketing, sales, logistics and customer service.

RGF’s VP/GM Walter Ellis, received ISO 9001:2015 Certification in record time, under budget and received an above and beyond congratulations from the audit team.

ISO 9001:2015 Certification Quality Management Kiosk allows employees to access all pertinent files and procedures.
